Heat treatment

The Agro-interstar Ltd company is the polish leading manufacturer of tillage spare parts.

History of the company is dated back to 1828 when the first plough parts were forged in traditional ways.

Thanks to the tradition and new technologies we became very modern manufacturer with big manufacturing potential.

To meet demand of our customers we implement new techs and work with new steel grades. In this way we started production of hard wear-resistant spare parts like BORON B27 and BORON B33 delivered by swedish SSAB steel manufacturer.

The wide range of spare parts we produce you can find in attached materials and on our website www.agro-interstar.pl
