Since 1991 Energoserwis S.A. has been present on the energy services market. The main purchasers of the Company's products and services are professional, industrial and municipal power plants and heat generating plants. The company specialises in providing supplies and services in the following sectors:

- water, steam, coal (dust, grate) and biomass-power boilers
- boiler components, including: pressurised boiler elements, i.e. membrane walls, coils; steam, water and technological piping, flue gas and air ducts, elements of flue gas dedusting systems, including filter bags, cyclone batteries, multi-cyclones, steel structures (platforms, supports)
- water treatment plants (demineralisation plants)
- technological and industrial installations
- specialised services in scope of welding and heat treatment
- laboratory testing: non-destructive: RT, UT, MT, PT, VT, endoscopic and stelescope tests, mechanical, i.e. stretching, bending, notch-impact stress.

The services and supplies the company provides are based on its own technical documentation or the documentation provided by the client.
