Laboratory

Other services

GUMET has a tool shop for the production of vulcanization molds, tools for stamping metal elements and peripheral equipment. Our own physico-chemical laboratory allows you to control the raw materials used for production and the quality parameters of final products. The company is highly specialized: the main product is the components of bearings: bearing seals, cages, rings, special bearings that are supplied to bearing manufacturers all over the Europe. Products for the automotive industry are also produced.

The high quality of manufactured products are guarantee by certificates: ISO 9001, ISO 14001 and elements of VDA 6.1, IATF 16949 (PPAP, FMEA, SPC, APQP) and ISO 18001.

GUMET provides services (in the field of metalworking):

- machining on manual and CNC machines,
- zinc phosphating,
- electroerosion treatment,
- applying of adhesives on metal elements,
- tool services (design and manufacturing),
- punching and pressing on mechanical presses,
- vibro-abrasive surface treatment
- cryogenic deflashing treatment.
