Categories of services:
Plastic forming
Welding
Cutting

The company PRONAT was established in 1991. At the beginning of our business we provided our customers with garden structures such as bowers, garden furniture and playground equipment all made out of wood. It is worth noting from the start that we have been able to set up these kind of facilities in private and public space with any documentation that may be required.

Since 2010, inspired by a high demand for outdoor fitness, we have expanded our range by producing an outdoor gym made out of steel. Currently we are providing garden architecture, playground facilities and outdoor fitness equipment, which is made out of steel as well as wood. We use the following tools: a band saw, tube bender and milling machines. To connect items we weld them using the MIG/MAG system. For aluminium cuts we use a milling machine which is the most appropriate tool in this kind of industry. Our company also uses a milling plotter which enables us to cut items out of aluminium as well as HDPE items quickly and efficiently.
