Region:
podkarpackie

Services:
machining
metal treatment
mechanics
automation
cutting
welding
and other processes

PZM has been operating on the market since 1980. From the very beginning we have been working in metal and machine industry for which we have been designing and manufacturing all types of products, ranging from metal components to entire production lines complete with automation, control devices and robotics. We supply services and products for industries such as: tire production, mining, automotive industry, military industry, metallurgy, aviation, railway industry, transportation industry, chemical industry, building industry, food industry and others.

Our activity is focused on:

- mechanics
- automation
- hydraulics
- pneumatics
- designing machines and devices

Scheme of operation of PZM offers 3 different paths: manufacture basing on Customer's documentation; comprehensive project management from the very first sketch to implementation; as well as design of technical project of machine or device.
