- Cutting**

PPH Krystian was founded by Krystian Klementowicz and is based in Lublin. Thanks to our extensive knowledge and over 30 years of experience, we can boast an established position both on the Polish and international market.

The Company's core activity covers innovative technological solutions. We manufacture modern machines for the paper industry, designed for the packaging of hygiene papers and the production of cardboard tubes. Due to the dynamic development and the pursuit of a constantly changing environment, our company also produces SlimLED lighting, in which light sources are integrated into the fixture.

Our range in the production of machines includes: paper tube making machines with twin- and multi-knife cutters, multi-knife cutters, rewinders, circular saws, banding machines, reel warehouses, paper tube packaging systems, polyurethane foam machines and special-purpose machines. Additionally, PPH Krystian makes use of water cycle and recuperation, machining and laser cutting technologies.
