machining
other services

Company's activity was started in summer 2015. Thanks to many years of experience, we immediately focused on designing and building machines for the bottling industry. We are specialists in the automation of production processes in the food industry. What distinguishes us is our special attention to meeting individual customer expectations. Our pride is our highly qualified staff, consisting of several dozen people. Thanks to our constantly improved knowledge and skills, we perform concluded contracts on time and reliably. We are proud of projects we have completed not only in Poland, but also in many European countries and beyond. Our products are mainly PET blow moulding machines, unscramblers for PET, HDPE and PP bottles, conveyors, tilters, group forming machines, manipulators etc. Despite our short presence on the market, we enjoy many completed projects and growing trust of our customers. High flexibility in operation and experienced staff allow us to carry out many individual orders, and long-term cooperation with scientific institutions results in constant development of products from our offer.
